There is an inconsistency in at least one of your observations.
Check for situations where the response to the first question is yes but the sec
> ond bid is lower than the first
or for situations where the response to the first question is no but the second
> bid is higher than the first.
After solving this issue try the command again.

```
. doubleb pork_bid_1 pork_bid_2 pork_1 pork_2 work_fulltime working nearfarm ar
> ea_urban
```

There is an inconsistency in at least one of your observations.
 Check for situations where the response to the first question is yes but the second bid is lower than the first
 or for situations where the response to the first question is no but the second bid is higher than the first.
 After solving this issue try the command again.
r(498);
